WORK EXPERIENCE

DELIVERY DRIVERS INC.   Irvine, CA
Contracted Developer   *March 2019 – Present*
- Created a modern email templating subsystem with React and Node.js for more efficient email editing and storage towards business needs
- Transitioned 21+ year old legacy system VBScript/ASP to a modern technology stack with newly updated front-end and back-end code architecture
- Effectively practiced agile methodologies, such as daily scrum and weekly sprint kickoff meetings with other developers
- Solved 11+ VBScript/ASP errors that hindered business operations for clients/users while working on the migration of legacy code to a modern framework via Node.js RESTful APIs and MySQL

LOTUS GARDEN   Covina, CA
Web Application Consultant   *June 2018 - February 2019*
- Designed a website with HTML, CSS, JQuery, and Bootstrap to refine visual branding of the restaurant
- Advised with business owners to create a cost efficient hosting platform that aligned with allocated annual budget
- Generated 23% increase in patronage through the implementation of a stronger online presence with digital menus and social media campaigns

MANAGEMENT CONSULTING GROUP UCSB   Santa Barbara, CA
Subject Matter Expert Advisor   *April 2017 – June 2018*
- Helped over 25 local ventures grow over 300% (each) in sales or performance through organizational and strategic consulting workshops
- Led quarterly SQL and Tableau workshop for interested participants to identify patterns in datasets and construct dashboard visualization for data forecasting
- Advised participants of Gaucho Case Competition through research with large data and technical support in regards to understanding enterprise software and full-stack languages

PROJECTS

Face-Recognition - Github
A React application that allows the user to input an image link in return detect the faces of an image
- Managed data storage from users registration and login input via PostgreSQL
- Integrated an image recognition API from Clarafai that enables the detection of a given face of an image
- Designed front-end layout with tachyons for reading and responsive interfaces with as little CSS as possible

Book-with-me - Github
 A web application based on Airbnb that allows users to login, register, and book available rental options
- Created modular front-end views with React and Redux for encapsulation of business logic and responsive performance
- Utilized MongoDB for back-end data storage in regards to the detail of rental types and its structure
- Incorporated CSS preprocessors like SCCS for clarity and extensibility of UX design and implementation
- Integrated third party API such as Google Maps to display informative location based on description
